

## Rasp Bars

Rasp bars mounted on the drum threshing-separating device of a combine harvester, are the right and left direction of the ribbed surface. With 60+ years of experience in hot rolled steel sections, we produce hot rolled rasp bars, which makes them unique compared to other production methods, especially having the same standard in each piece in terms of weight and quality. In our service center we cut to length, drill holes according to our customers' technical drawings. We can customize the products according to our customers' needs such as sandblasting and painting based on given RAL codes. We are able to produce all models for all combine harvester brands.

**Length:**

It is produced in length and perforated shape in accordance with customer special requests.

DIMENSIONS	WIDTH	RIB TIP THICKNESS	RIB BASE THICKNESS	RIB BASE LENGTH	RIB HEIGHT	RIB HEIGHT	DISTANCE BETWEEN RIB TIPS	DISTANCE BETWEEN RIB BASES	THIN SECTION THICKNESS	RIBBED SECTION THICKNESS
